Two years ago, my family moved to a new city and I had to study in a new school. As I had few friends there, I felt lonely. Then I met Tony. The first time I saw him, he was standing in the center of a group of students, telling jokes. The children around laughed from time to time. Tony knew about my problem. He asked me to play basketball with his friends and helped me with my studies. We soon became good friends.

About a year ago, however, Tony's father was killed in an accident. As a result, his family had to move to a small house. Tony changed into a different person. He became silent and he even lost his interest in studies. Several times, I invited him to go out and play basketball with me, but he refused. I wanted to help him, but I didn't know what to do.

Then something strange happened in my class. Two classmates lost the money in their schoolbags.

Up to two thirds of children don't get as much sleep as they should do, and this can make them nervous and slower at school, researchers say.

So how long should young people sleep each night? The answer is between 8 and 10 hours. If you don't get enough sleep at night, you'll have less energy the next day.

But the researchers say many children have missed out on 4,500 hours of sleep by the time they are seven years old. They say that children miss sleep because they have TVs and computers in their rooms, and busy parents don't read to their younger children at night any

more. The traditional "bedtime story" helps children to relax and fall asleep peacefully. Children with TVs and computers in their bedrooms were more likely to sleep badly, and to get less than eight hours' sleep. Even losing one hour's sleep a night can mean that children do less well at school.

German scientists think that your brain keeps working while you're asleep. To show that they were right, they gave two groups of people a problem to work out. One group went to sleep, and the other group stayed awake. The result? The people who slept worked out the answer more quickly, suggesting their brains had been trying to find the answer while the people were asleep. So, make sure you get enough sleep tonight, and you'll be at your best tomorrow!

The tiger is the largest wild cat in the world. The big cat weighs about 363 kilograms and is about two meters long.

Tigers wait until it's dark, then go out to find their food. When a tiger sees an animal, it moves very quietly, then jumps on the animal to kill it. It can take several days for a tiger to finish eating its kill. The tiger eats until it's had enough, and then it covers the dead animal with leaves. Later, when the tiger is hungry again, it comes back to eat more.

Tigers are different from others in the cat family: they like water, and they often jump into rivers to swim.

Some tigers live in very cold places—in parts of North Korea, eastern Russia, and Northeast China. Other tigers live in warm places—in India and parts of southeast Asia.

All tigers are in danger. People killed them to use their skins for clothes, and their bodies for medicine. In addition, there is also less and less land for tigers to live on. But now people know that tigers are in danger and have made plans to protect them.

Dear Diana,

My father has bought an iPad recently. He has warned me not to use it, because there is lots of important information in it. But I like it so much that I always want to have a try.

Yesterday, when my father was out, I tried the iPad. Unluckily, I dropped it on the floor carelessly. I hurried to put the broken iPad back on the table without saying anything.

My father was really angry when he came back. Now I feel terrible. It's going to be expensive to mend it. Should I tell him about it?
